

Class – II

1st Monthly

1. What is geometry?

Ans: Geometry is the branch of mathematics that deals with the measurement of properties and relationship of properties and relationship of lines, points, angles, surfaces and solids.

2. What instruments are used in geometry?

Ans: The instruments used in geometry are:

- i. ruler
- ii. set square
- iii. protractor
- iv. divider
- v. compass

Draw and Define:

1. Straight line: A straight line has the same direction from point to point throughout its whole length.

Fig: Here, AB is a straight line

2. Curved line: A curved line changes its direction continuously from point to point.

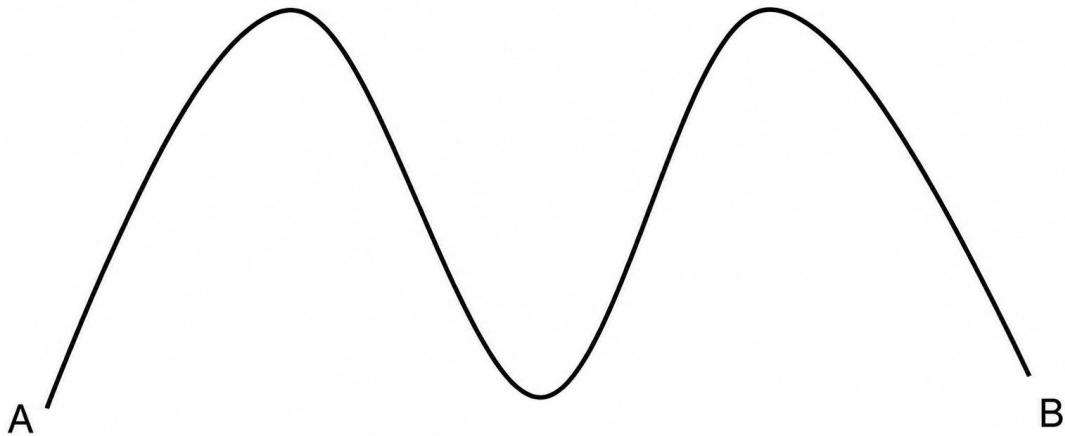

Fig: Here, AB is a curved line
